

AirPlus Portal: Limit display in Portal.

AirPlus assigns a **Business Partner Limit** to every company during the Corporate Onboarding Process. This Business Partner Limit represents the maximum amount, which AirPlus allows a customer to have outstanding at any point in time. AirPlus reserves the right to change this Business Partner Limit during the lifetime of the contract in accordance to our General Terms and Conditions.

The Business Partner Limit can be allocated to the ordered products and to the relevant frameworks for these respective products. The allocation of such **Framework Limits** to products and/or frameworks initially takes place during the order process.

The limits at the framework level can be freely defined to ensure the greatest possible flexibility. This means the sum of all framework limits is not bound to the maximum Business Partner Limit. As spend and the full usage of the framework limit cannot be planned 100%, we grant full flexibility to distribute the limit and to map internal structures like divisions, countries and projects.

The Program Manager and/or Portal Administrator can view or adjust the framework limit at a later point in time using the order form under the tab “Frameworks” > “Go to details”.

However, **every transaction will authorize against** the framework limit allocated by the corporate and the Business Partner Limit assigned by AirPlus.

All administrative users can - subject to being assigned the necessary rights - view the “Available Credit Limit” on framework level. This limit is also referred to as “Open-to-Buy”. The Available Credit Limit shows the amount still available for use under the allocated framework limit before the end of a particular billing cycle.

After every billing cycle, once any outstanding amounts have been paid, the full limits will automatically become available.

For **AirPlus Virtual Cards** and **AirPlus Lodged Accounts** the administrative users can view the limit on framework and card level.

For **AirPlus Corporate Cards Type 1** the administrative users can view and change the limit on framework and card level. The cardholder (Portal role Card User) can only view the limit on card level.

For **AirPlus Corporate Cards Type 2** the administrative users can view and change the limit on framework and card level. The cardholder (Portal role Card User) can only view the limit on card level.

For **AirPlus Corporate Cards Type 3** the administrative users can view the limit on framework, but not on card level. Only the cardholder (Portal role Card User) can view the limit on card level.
